

# DIY Bouncy balls

Have some fun with your kids with this DIY for bouncy balls.

## Ingredients

- ½ cup of warm water
- 1 Tbsp of Borax
- 1 to 2 Tbsp of Elmer's glue

**Step 1:** Stir warm water and borax together. Stir until borax is fully dissolved

**Step 2:** Slowly pour your desired amount of glue into the bowl of borax solution. The more glue you use, the bigger the ballz

(To get this light blue translucent glitter super bouncy ball, we combined clear and glitter glue together as we poured it into the borax solution)

**Step 3:** Squish and squeeze the glue. Optional to wear gloves while squishing the glue in the mixture.

**Note:** The glue is going to go hard, not the borax solution. You will be left with a bowl of solution, so you can repeat the process and make as many super bouncy balls as you like

# DIY Bouncy balls

**(A word of warning. These super bouncy balls are basically very very thick slime. So if you leave them for any length of time they will slowly go flat and make a disc. But it's very simple to just roll them in your hand to make them ball shaped again)**
